DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to the following patentably distinct species: Species I as illustrated in Figures 1-10, Species II as illustrated in Figures 11-13, Species III as illustrated in Figures 14-18, Species IV as illustrated in Figure 19, Species V as illustrated in Figures 20-23, Species VI as illustrated in Figures 24-25, Species VII as illustrated in Figures 28-29. The species are independent or distinct because:

Species I is distinct in that it is considered the base species from which the others are considered distinct.

Species II is distinct in that a selector portion is used to select what is being output from the buffer before being encoding by the run-length encoding.

Species III is distinct in that it contains hardware allowing for selection of various data block formats. The additional hardware includes the group of registers, a second input, and an information register selection portion.

Species IV is distinct in that it is switching between two similar systems in series to allow for parallel operation to perform the same task accomplished by Species I.

Species V is distinct in that it uses two components to count the number of code words produced by the encoding system.

Species VI is distinct in that it is counting the number of code words and receiving a threshold value then operating/adjusting the encoding system based upon a comparison of the actual and threshold value.

Art Unit: 2609

Species VII is distinct in that it is using a processor to relay information between two process chains wherein each process chain is responsible for a different task.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

2. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
